NB: LNAI 890 and LNAI 1037 are the first and second books respectively in this series of three books on Intelligent Agents.

Das LRL (8 Bände mit Halbbänden, 1988?2005) beschreibt zum ersten Mal in einem einzigen, einheitlich konzipierten Werk ausführlich alle romanischen Sprachen, ihre Dialekte und die von ihnen abgeleiteten Kreolsprachen in der Gesamtheit ihrer Aspekte: Darstellung des Sprachsystems in Gegenwart und Geschichte, Funktionieren des Systems in den Texten und in der Gesellschaft. Hinzu kommen die historisch-vergleichenden, die kontrastiven und die sprachtypologischen, also einzelsprachenübergreifenden Beschreibungen, die für das Verständnis des Faches Romanistik, aber auch für die Allgemeine Sprachwissenschaft und die Anthropologie und die Ethnologie von besonderer Bedeutung sind. Ähnlich fachübergreifende Bedeutung haben die Bände I,1 und I,2 mit der Darstellung vergangener und heutiger sprachwissenschaftlicher Methoden und der Vorstellung der verschiedenen Bereiche einer Sprache im allgemeinen. Das LRL bietet für jeden einzelnen Bereich eine erste inhaltliche terminologische und bibliographische Orientierung und weist zugleich auf mögliche Themen für weitere Forschungen (insbesondere im jeweiligen Schlußkapitel "Desiderata") hin.

In Calabria, Italy, where bergamot has been successfully cultivated since the eighteenth century, it is commonly defined as "the prince of the Citrus genus." Written by an international panel of experts from multiple disciplines, *Citrus bergamia: Bergamot and its Derivatives* represents the most complete treatise on bergamot and its derivatives currently available. Although production of bergamot and its derivatives is comparatively small, its chemical composition and biological properties have been of great scientific interest and the oil is considered essential in many high-quality perfumes. There is also an increased demand for bergamot oil for food flavorings and gastronomy. A tribute to bergamot, *Citrus bergamia: Bergamot and its Derivatives* covers all aspects of bergamot, from its historical and botanical origins, cultural practices, and transformation technologies to the use of its derivatives, possible contaminations, and biological activity. The book examines the chemical composition of bergamot in peel oils, leaf oils, juice, and fruits, extracted by various techniques—mechanical, distillation, and by supercritical fluids. It covers newly identified classes of compounds, limonoids and statins, describing the identification and assay of natural statins and the pharmacological activities of limonoids. It also discusses bergapten properties and its uses in cosmetics and medicine, as well as the use of bergamot in perfumery and in foods and beverages. The book concludes with a chapter reviewing the available data and global legislative status of bergamot as they relate to the safe use and trade of bergamot products.

The aim of this work is to provide a preliminary analysis

of a much more far-reaching investigation into the relationship between technology and philosophy. In the context of the contemporary German thought, the author compares the different positions of Karl Marx, Martin Heidegger, Ernst and Friedrich Jünger, Arnold Gehlen and Gunther Anders. The term “machine” is used precisely to mean that complex material device assembled in the last quarter of the 18th century as a result of the definitive modern refinement of certain fundamental technologies, i.e. metallurgy, precision mechanics and hydraulics. The “machine” discussed here arrived on the scene of man’s history when the processes of spinning and weaving were entrusted to semi-automatic means; when the water wheels used in mills, hitherto always made of wood, were supplanted by the metal levers of the steam engine; and especially when the steam engine was connected to the weaving frames, to the metalworking hammers, and to other machines used to manufacture other machines in an endless reiteration of assemblies and applications, the enormous outcome of which is what subsequently came to be described as “mass production”. The philosophers discussed here were also dealing with the type of machine described above and in their works we can identify three model images of this idea of machine. These images have been drawn on at various times, also outside the realms of philosophy, and they still provide the backdrop for our knowledge of the machine, which has circulated in a great variety of languages. Una delle soddisfazioni maggiori che si possono provare, quando l'età raggiunge livelli piuttosto elevati, è la

costatazione di aver speso la parte più significativa della propria vita in attività congeniali con la nostra preparazione culturale e con la predisposizione caratteriale. In quei casi il lavoro, anche se irto di difficoltà, risulta piacevole e si è spinti a dare il meglio di noi stessi, non per assolvere ad un dovere, ma per la soddisfazione che si prova. Non ci può essere appagamento maggiore nella vita di lavoro, che riuscire a superare difficoltà, che in partenza sembravano impossibili!

Mit über 32.000 Vokabeln bietet das Wörterbuch eine reiche Zusammenstellung von Fachausdrücken der modernen Wirtschaftssprache; diese sind so aufgelistet, dass ein schnelles Auffinden ohne mühsames Quersuchen möglich ist. Die Fachterminologie umfasst die Bereiche Finanzen, Börse, Banken, Werbung, Marketing, Buchhaltung, neue Technologien, Umwelt, Europäische Union, Arbeitswelt und Statistik sowie die im Wirtschaftsjournalismus üblichen Begriffe. Der Anhang enthält bilanzspezifische Ausdrücke, die häufigsten wirtschaftlichen Abkürzungen, einige geographische Namen unter besonderer Berücksichtigung Südtirols als auch eine Auswahl an Redewendungen und Neologismen.

J. IONEYMAN The second textile and clothing research and development programme (1982-1985) supported by the EEC was undertaken with the prime objective of strengthening the competitiveness of the Community textile industries by stimulating innovation. From the generation of the research ideas through to the application of new technologies, the optimum conditions for scientific research demand highly trained and qualified people working in well-equipped laboratories. The Commission, in collaboration with the textile industries working through Comitextil, participated in the selection of suitable topics and supported the implementation of the programme and the publication and dissemination of the results. In all, 24 institutes in seven member countries

carried out the programme which was divided into 35 separate but co-ordinated contracts. The costs were shared equally between the Commission and the participating institutes. The results were presented by selected specialists at the closing symposium held in Luxembourg on the 18 and 19 September 1985. The technical sessions covered the four topics : garment physiology and construction, quality of knitted fabrics and articles, application of new spinning technologies in the wool industry, and the upgrading of linen. In addition, prominent industrialists and Commission officials presented papers concerned with the present situation and the prospects for textile manufacture in the Community. Possible future research topics were outlined and the need was stressed for an increase in the amount of research and development to be carried out.
